

EXPERIMENT-6

ROLL NO: 240701244

NAME: KAVITHA R

Experiment with different layouts and color schemes for app.

Collect user feedback on aesthetics and usability using

GIMP(GNU Image Manipulation Program (GIMP))

Aim:

To experiment with different app layouts and color schemes and collect user feedback on aesthetics and usability using GIMP.

TOOL USED:

GIMP (GNU Image Manipulation Program)

Description

In this experiment, a travel app design was developed using Figma. Different variations of the design were created by modifying layouts, colours, and fonts. These designs were later refined using GIMP based on user feedback collected through Google Forms. The aim was to evaluate user preferences and improve the aesthetics and usability of the application interface.

Google Form

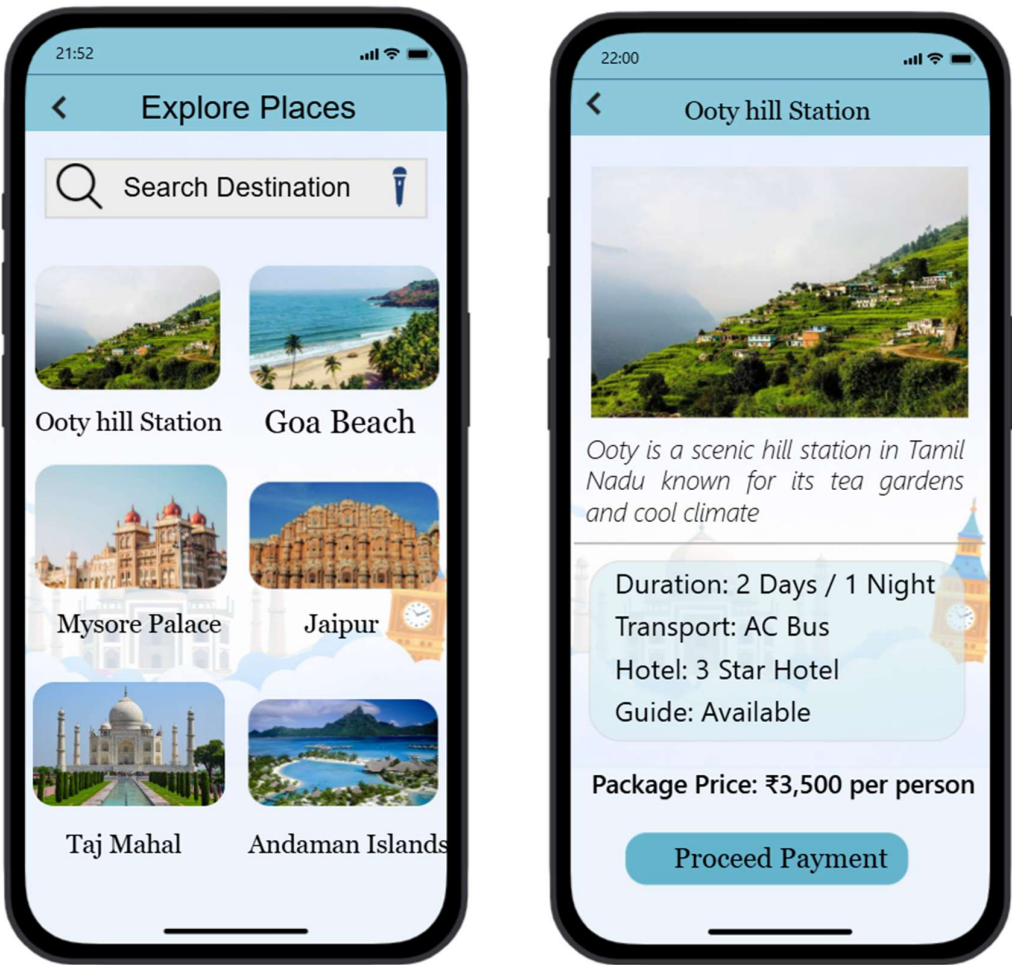

A feedback form was created using Google Forms to collect user responses. The form included the following details:

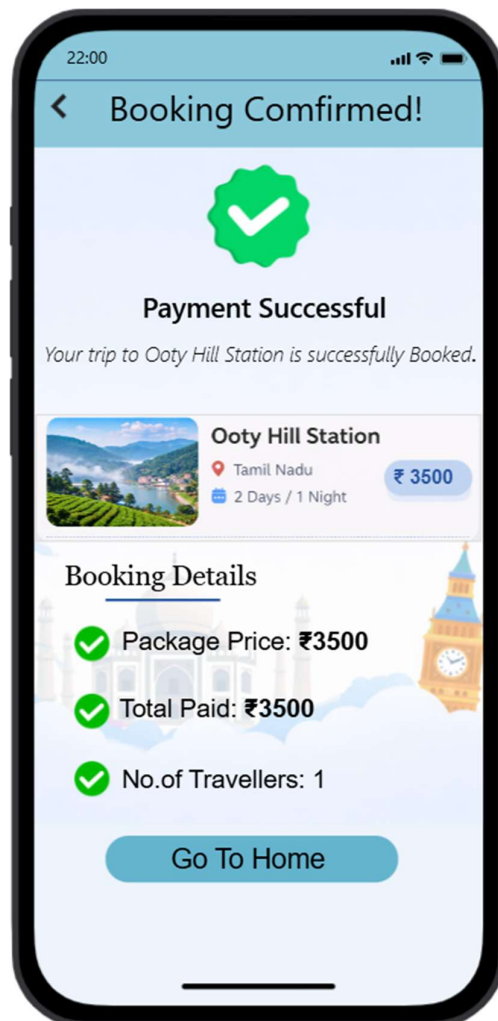

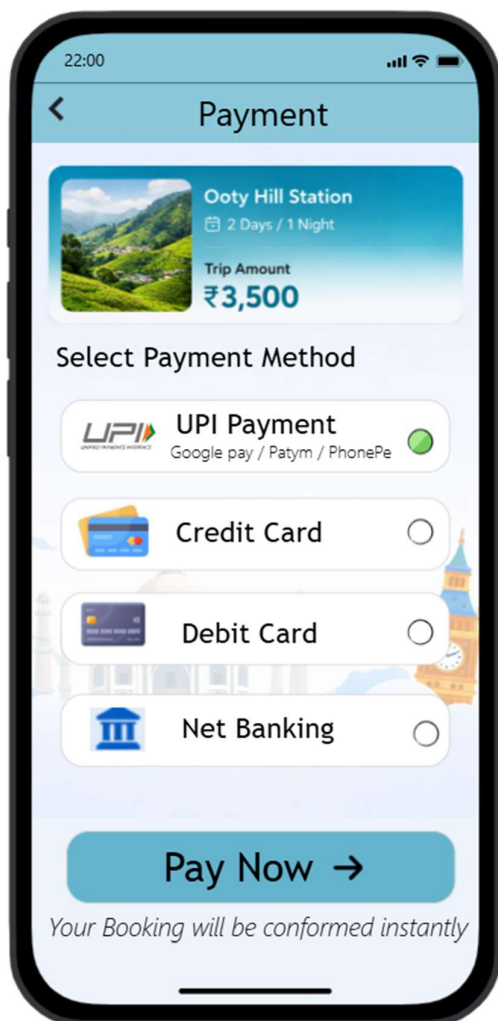

- User name
- Rating of the design
- Preferred theme (Light Theme, Dark Theme, or Colorful Theme)
- Suggestions for improving the layout and colour scheme

The form was shared with several users to gather their opinions about the app design.

Design

The travel app design was shared with users to gather feedback. The layout included sections such as a header with the app title, a content area showing travel destinations, and navigation buttons for exploring and booking trips.

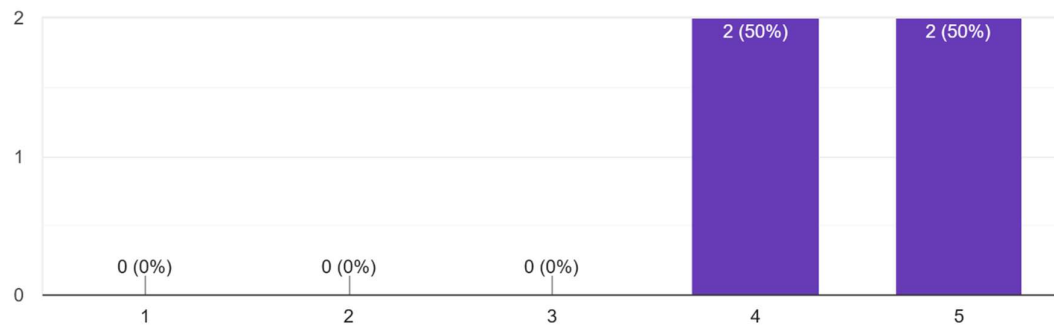

User Feedback

Based on the responses collected from users:

- Most users preferred the Light Theme because it was clear and easy to read.
- Some users preferred the Dark Theme as it looked modern and visually appealing.
- A few users suggested improving colour contrast and increasing button size for better usability.

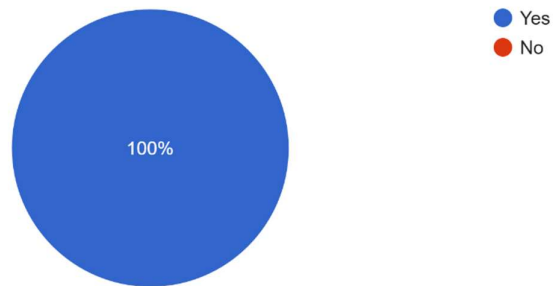

Rate the overall design of the travel app

4 responses

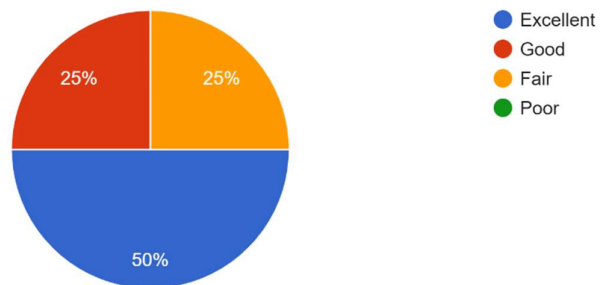

Is the layout of the travel app easy to understand?

4 responses

How do you find the color scheme used in the travel app?

4 responses

What changes would you suggest to improve the travel app layout?

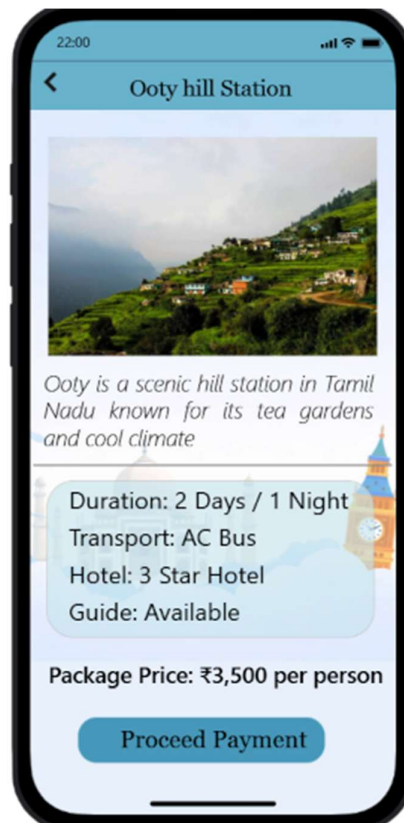

Improve color contrast between text and background for better readability.

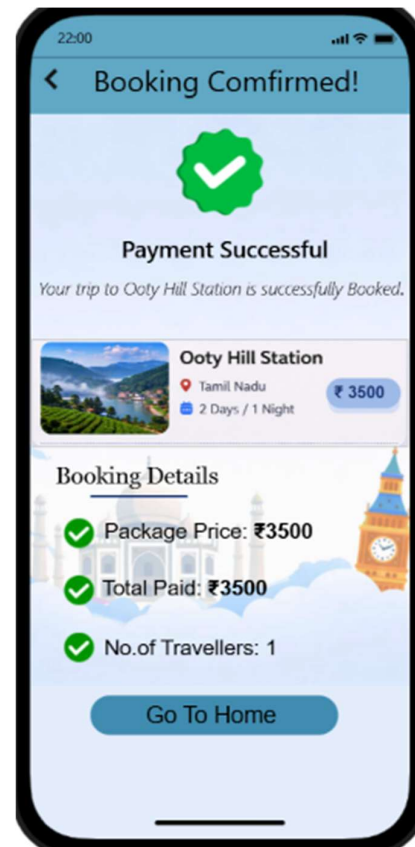

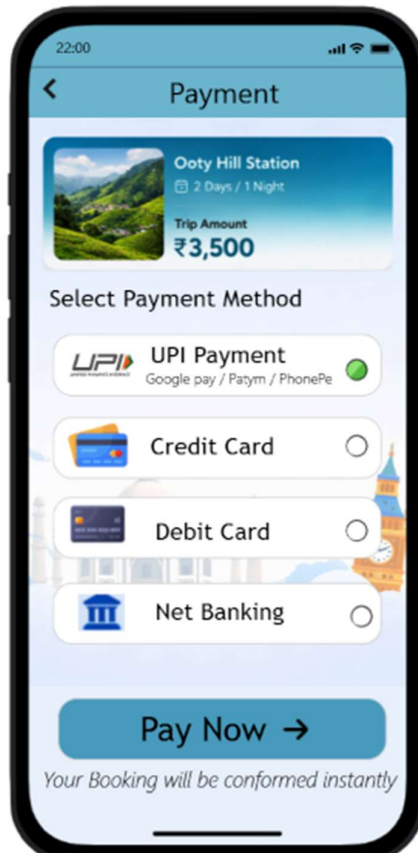

Improve the alignment of images and text.

Improved Design

Based on the feedback, improvements were made to the design:

- Enhanced colour contrast for better readability
- Adjusted spacing between elements
- Improved button visibility
- Applied a more consistent colour scheme

Result

Different layouts and colour schemes were tested for the travel app design. User feedback helped identify the most preferred theme and areas for improvement. The final design was refined based on the feedback to enhance both usability and visual appeal.
