USER INTERFACE AND DESIGN

COMPARISON OF UI DESIGN BETWEEN TWO FIGMA CREATION

BAD UI:

GOOD UI:

PROTOTYPE LINK:

<https://www.figma.com/design/0Wy7ltHpnKLxp8DOPo9V1L/Bad-and-Good-UI?node-id=0-1Ct=B1vtt0zyAzluAMt8-1>

The two websites use different UI design approaches. The comparison is shown below.

BAD UI WEBSITE

1. Design Style:

- The layout appears busy and overloaded with many icons and buttons.
- Multiple services are displayed on the same screen without clear priority.
- Promotional banners reduce visual clarity.

2. Content Presentation:

- All travel-related services such as flights, hotels, trains, cabs, and insurance are shown together.
- The user must scan the entire screen to locate a specific service.

3. Navigation:

- Icons are small and closely arranged.
- Navigation feels functional but not intuitive.
- First-time users may find it confusing to decide where to start.

4. User Experience:

- Increases cognitive load due to excessive options.
 - Less visually appealing on mobile screens.
-

GOOD UI WEBSITE

1. Design Style:

- Simple, modern, and visually attractive layout.
- Uses a large background image related to travel, creating emotional appeal.
- Proper spacing improves clarity and focus.

2. Content Presentation:

- Highlights the main purpose: searching for flights, hotels, and packages.
- Minimal text with clear headings guides the user.
- Avoids unnecessary elements on the home screen.

3. Navigation:

- Bottom navigation bar is clean and easy to understand.
- Smooth navigation improves usability.

4. User Experience:

- Reduces mental effort for users.
 - Faster task completion.
 - Provides a pleasant and engaging interface.
-

KEY DIFFERENCES:

- **Information Flow:** The bad UI presents all services at once, while the good UI reveals information in a more controlled and meaningful way.
- **User Attention:** In the bad UI, attention is scattered across many elements; in the good UI, attention is directed toward a single primary task.
- **Screen Usage:** The bad UI uses screen space inefficiently, whereas the good UI uses spacing and imagery to improve clarity.
- **Ease of Interaction:** The good UI allows quicker and smoother interaction, while the bad UI requires more effort to navigate.
- **First-Time Experience:** New users may feel overwhelmed by the bad UI, but the good UI feels welcoming and easy to understand.
