

EXPERIMENT 4A

ROLL NO: 240701244

NAME: KAVITHA R

Conduct task analysis for an app and document user flows. Create corresponding wireframes using Lucidchart.

Aim

To understand and document the steps a user takes to complete tasks in a mobile application and represent the user flow using Lucidchart.

Tool Used

Lucidchart – Lucidchart is an online diagramming tool used to create flowcharts, wireframes, and system diagrams. It helps visualize user flows and application processes clearly.

Task Analysis

Task analysis is the process of identifying and analyzing the steps a user performs to complete a specific task in an application.

For the TripGo travel booking application, the following main tasks were identified:

1. Opening the application and logging in
2. Searching for a travel destination
3. Selecting a destination and booking a package
4. Making payment and confirming the booking

User Flow

1. Login Process

1. Open the website or mobile application.
2. Enter email and password.
3. Click the login button.
4. User is redirected to the main page after successful login.

2. Searching for a Destination

1. User searches for a location using the search bar.
2. The application displays available destinations.
3. User selects a destination from the list.

3. Booking a Travel Package

1. User selects a destination.
2. User chooses the booking option.
3. User enters traveler details.

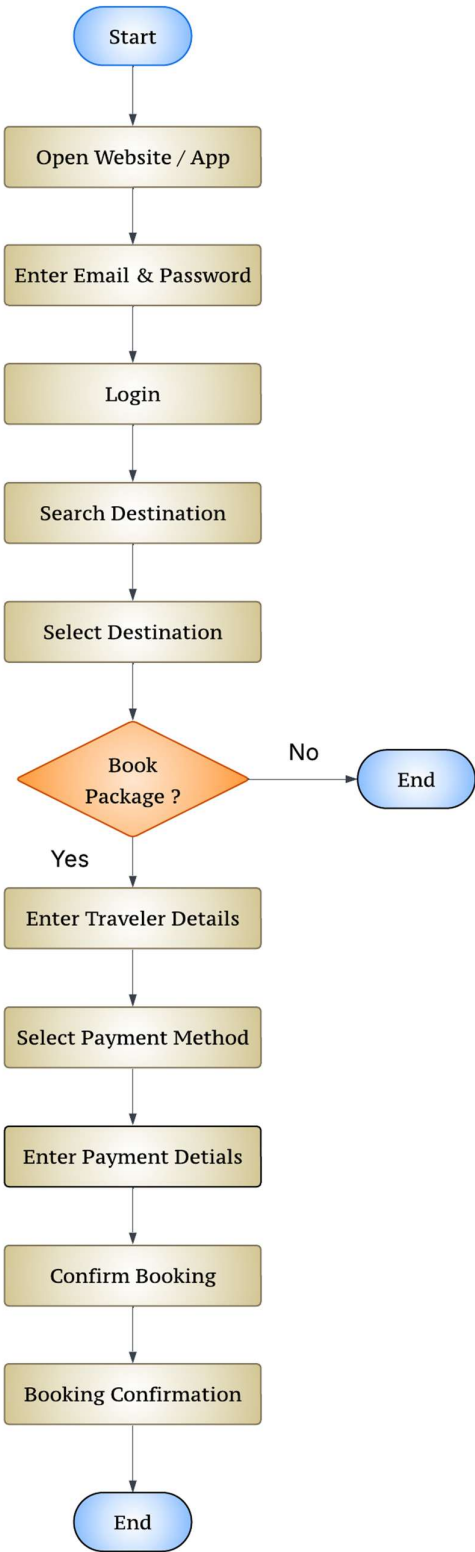

4. Payment Process

1. User selects a payment method.
2. User enters payment details.
3. User confirms the booking.

5. Booking Confirmation

1. After successful payment, booking confirmation is displayed.
2. The booking process ends.

Flowchart Representation

Explanation of the Flowchart

- The flowchart represents the sequence of steps involved in the TripGo travel booking application.
- It begins with the user opening the application and logging in with email and password.
- After successful login, the user searches for a location and explores available destinations.
- The user then selects a destination and chooses to book a travel package.
- Next, the user enters the required traveler details and selects a payment method.
- The payment details are entered and the booking is confirmed.
- Finally, a booking confirmation message is displayed indicating the successful completion of the process.

Conclusion

This experiment helped in understanding task analysis and documenting user flows for an application. By using Lucidchart, the workflow of the TripGo travel booking process was clearly visualized from login to booking confirmation.
