

EXPERIMENT-7

ROLL NO: 240701244

NAME: KAVITHA R

Develop low-fidelity paper prototypes for a banking app and convert them into digital wireframes using Pencil Project

Aim:

To develop low-fidelity paper prototypes for a banking application and convert them into digital wireframes using Pencil Project.

TOOL USED:

Pencil Project.

Low-Fidelity Wireframe Screens of Banking App:

The following images show the digital wireframes of a banking application created using Pencil Project. These wireframes represent the basic structure and layout of the application without detailed design. The purpose of the wireframe is to visualize the placement of UI elements such as text fields, buttons, and navigation components.

The banking application includes the following screens:

- **Login Screen** – Allows users to enter their username and password to access the application.
- **Dashboard Screen** – Displays the account balance and provides options such as transfer money, pay bills, and view transaction history.
- **Transfer Money Screen** – Enables users to send money to another account by entering recipient details and amount.
- **Pay Bills Screen** – Allows users to select a bill type and make payments.
- **Transaction History Screen** – Displays a list of previous transactions made by the user.

The images below represent the digital wireframes created for each of these screens.
